

Completion Requirements for Information Security 201 for Research and Development Personnel

Information Security 201 for Research and Development Personnel (LMS Item VA 64879) is available through the VA Learning Management System (VA LMS). There is a special requirement for completing this course. To ensure individual course completion, VA LMS Administrators should inform users of the requirement before they access the course.

In addition to passing the post test, an individual must view each page of the course for a full five seconds in order to receive credit.

After an entire page has completely downloaded (including all icons,) the internal course timer begins. The course menu page indicates if the user has viewed all pages of each module for five sections by coloring in a circle. If the circle is not filled in or half filled, that module, and thus the entire course, will not be marked complete.

In the screen shot above, the circle shows that the user has fully completed the module called “Introduction,” but they have not received credit for viewing the “Treatment of Sensitive Information” module.

For more information about the Information Security 201 for Research and Development Personnel course, visit the Employee Education System website.
